Automatic Technology (Australia) Pty Ltd to the extent that such may be lawfully excluded hereby expressly disclaims all conditions or warranties, statutory or otherwise which may be implied by laws as conditions or warranties of purchase of a Automatic Technology (Australia) Pty Ltd Garage Door Opener. Automatic Technology (Australia) Pty Ltd hereby further expressly excludes all or any liability for any injury, damage, cost, expense or claim whatsoever suffered by any person as a result whether directly or indirectly from failure to install the Automatic Technology (Australia) Pty Ltd Garage Door Opener in accordance with the installation instructions.
1. Safety Rules

Please read these important safety rules

This automatic garage door opener is designed and tested to offer safe service provided it is installed and operated in strict accordance with the following safety rules. Failure to comply with the following instructions may result in death, serious personal injury or property damage.

**WARNING!** • When operating the manual release while the door is open, the door may fall rapidly due to weak or broken springs, or due to being improperly balanced.
• Do not disengage the opener to manual operation with children/persons or any objects including motor vehicles within the doorway.
• If the door is closing and does not re-open when obstructed, discontinue use. Do not use a door with faulty obstruction sensing.

**ELECTROCUTION!** • Place opener in protected area so that it does not get wet.
• Do not spray with water.
• Do not open the protective covers.
• Do not operate opener if cable is damaged.

**CAUTION:** Emergency access • If your garage has no pedestrian entrance door, an emergency access device should be installed. This accessory allows manual operation of the garage door from outside in case of power failure.

Entrapment under operating door • Watch the moving door and keep people away until the door is completely opened or closed. Do not operate door when persons are near the door.
• Do not allow children to play with door controls or transmitters.
• Regularly conduct Open and Close cycle testing.
• Ensure the garage door is in good working order by undertaking regular servicing.
• Wall transmitters should be installed in a location where the garage door is visible, but out of the reach of children at a height of at least 1.5m.
• Install Safety Beams (recommended).

Fall from Ladder • Ensure ladder is the correct type for the job.
• Ensure ladder is on flat ground.
• Ensure user has 3 points of contact while on ladder.

Entanglement in or laceration from moving door • Keep hands and loose clothing clear of door and guides at all times.
• Keep hands clear of moving door as sharp edges can cause cuts or lacerations.

**DO NOT DO IT YOURSELF** • Keep the garage door balanced. Sticking or binding doors must be repaired. Garage doors, door springs, brackets and their hardware are under extreme tension and can cause serious personal injury. Do not attempt any garage door adjustment. Do not use if repair or adjustment is needed. Call for a professional garage door service.
2. Features

Warranty
Five (5) year/10,000 cycles full parts and labour warranty on motor, electronics and mechanical components of the opener when installed by an Automatic Technology Dealer.

TrioCode™ 128 Technology
Only transmitters with the TrioCode™ 128 Technology can operate with the latest GEN2 Openers, reducing the chance of interference from other radio frequency sources. TrioCode™ 128 transmitters have the ability to code into earlier model openers.

Code Hopping Technology
Every time a transmitter is used a new security code is generated from over 4.29 billion possible code combinations. This greatly enhances the security of the system and makes “code grabbing” a thing of the past!

Multi-Channel Transmitter
Multi-channel transmitters allow you to operate other devices such as an adjoining garage door or automated gate from the same handy unit.

Safety Reversing System
The automatic safety reverse system significantly reduces the risk of death or serious injury if trapped by a closing door. The safety reverse force can be adjusted for environmental conditions such as windy areas.

Memory Retention
In case of a power failure the opener does not lose the transmitter codes or limit settings.

Soft Start/Soft Stop
The opener eases into and out of each cycle making for smoother and quieter operation, as well as reducing wear and tear on the door and opener.

Manual Release
The manual release handle allows the door to be operated by hand in the event of a power failure.

Self Locking
There is no need to manually lock your garage door, as the opener ‘positively’ locks the door when closed.

Service Indicator
The opener has a built in service counter. From factory this is loaded with 3000 cycles. When this counter expires, the service yellow LED will light up and at the start of each door movement the beeper will sound three times. Contact your dealer/installer for service. (Refer to 10.5 for information).

Service Fault Indicator
Flashing LEDs on the control panel easily identify operational problems or service requirements.

Dynamic Door Profiling
Changing door characteristics are automatically compensated for and “learnt” with each operation of the door.

Vacation Mode
A transmitter can be programmed to disable the garage door opener radio receiver. This is ideal if the door is to be left idle for prolonged periods. (Refer to 8.2 for information)

Pet (Pedestrian) Mode
A transmitter can be programmed to open the door partially to allow pets access to the garage. The default PET Mode height can be adjusted to a desired position. (Refer to 7.4 for information). To code a transmitter button to operate PET mode refer to 8.3 for information.

LED Courtesy Light
Using the latest Light Emitting Diode (LED) technology, the opener features two LED’s. These LED’s produce a brilliant white light that illuminates the garage upon activation.

The LED courtesy light automatically switches on for approximately four (4) minutes (time programmable) when operating the door. This can also be programmed to turn on and off from a transmitter. (Refer to 8.4 for information)

Note: Intermittent operations may occur in areas which experience very strong winds. The strong wind puts extra pressure on the door and tracks which may in turn intermittently trigger the safety obstruction detection system.
4. Operating your door

For maximum efficiency of your opener, your garage door must be in good operating condition.

An annual service of your garage door by a Door Professional is recommended.

**CAUTION:** Activate the opener only when the door is in full view, free of obstructions and with the opener properly adjusted. No one should enter or leave the garage while the door is in motion. Do not allow children to play with or near the door.

**ELECTROCUTION!** This opener is a mains voltage plug-in domestic appliance and there are no user serviceable parts inside this opener.

**Transmitter**

- To operate the opener, press the programmed transmitter button until your door begins to move (usually 2 seconds). Make sure you can see the door when you use the transmitter.
- If you are in a vehicle you should aim the transmitter through your windscreen *(Fig. 4.1)*.
- Check that the door is fully closed before you drive away.
- If you press the transmitter whilst the door is moving the door will stop. The next press of the transmitter will move the door in the opposite direction.

The transmitter may also be programmed to operate the following features (Refer to Section 8 for full details):

- Turn the courtesy light on and off without operating the door,
- Put the garage door opener into “Vacation Mode” where it will not respond to any transmitters.

**NOTE:** Additional transmitters may be purchased at any time.

6. Opener Safety & Security

6.1 Manual Door Operation
To disengage the opener from the door (preferably with the door in the closed position), pull down on the string handle on an angle towards the door (Fig 6.1). This will allow you to manually open or close the door.

**CAUTION:** Do not use the string handle as a mechanism to open the door. Failure to comply may cause serious injury.

To re-engage the opener pull the string handle away from the door - see 6.4 Re-Engaging the Opener.

6.2 Emergency Evacuations
In emergencies the garage door can be disengaged from the opener, via the manual release cord and the door opened manually. The manual release cord should be a maximum of 1.8m from the ground. The cord can be adjusted for special considerations.

6.3 Power Failure
When there is a power failure, the opener will be unable to automatically open or close your garage door. To use your door whilst there is no power you will need to disengage the opener and use the door manually – see 6.1 Manual Door Operation.

6.4 Re-Engaging the Opener
When the door has been disengaged from the opener, the shuttle assembly, attached to the manual release cord, can move up and down the chain. Re-engage the opener (Fig 6.1) (preferably with the door open to waist height) and then press the programmed transmitter button, the motor will run until the shuttle assembly engages the chain index (Fig 6.2), you will hear it click into place. Then the door will operate as normal.

6.5 Security - Inbuilt Locking Facility
**DO NOT** lock your door when your opener is engaged as it has inbuilt locking facility. With the opener engaged your door will be locked whether the power is on or off.

**CAUTION:** When the opener is manually disengaged, the door is no longer locked. To lock the door manually, re-engage the opener after the door is closed.
7. Safety Testing

7.1 Test the Close Cycle
a. Press the transmitter to open the door. *(Fig 7.1)*
b. Place a piece of timber approximately 40mm high on the floor directly under the door *(Fig 7.2)*.
c. Press the programmed transmitter to close door.
d. The door should strike the object and re-open.

7.2 Testing the Open Cycle
a. Press the transmitter to close the door *(Fig. 7.1)*.
b. Press again to open the door.
c. When the door reaches approximately half way, firmly grab the door's bottom rail - the door should stop.

If the door does not reverse readily when closing, or stop when opening, put the door into manual and contact your installer immediately for a door service.

7.3 Test the Manual Door Operation
Periodically disengage the opener (Section 6.1) and manually operate the door. The door must be smooth to operate by hand. The force required on the bottom rail should not exceed 15 kg.

7.4 Setting the PET Mode position
When activated, PET mode drives the door to the preset position from the close position.
a. Drive and stop the door at the desired PET mode open position by pressing the transmitter button coded for Open/Stop/Close operation.
b. Press and hold the OPEN button on the opener for six (6) seconds until the OPEN and CLOSE LED's are lit to record the new PET position.

To program a transmitter button to operate PET mode refer to 8.3 Code Transmitter for PET Mode.

Periodically test if a PET mode button is pressed, while the door is moving, the door will stop or when the door is in the PET position, the door will close.

**CAUTION:** Take care when completing a safety test. Failure to follow this warning can result in serious personal injury and/or property damage.

**WARNING!** If the door is closing and is unable to re-open when obstructed, discontinue use. Do not use a door with faulty obstruction sensing. Contact your dealer for support.

Select the button on the transmitter that has been programmed to operate the door.

If transmitter is not programmed, Refer to Section 8 to program transmitter.
8. Coding Transmitters

8.1 Setting the Transmitter to Operate the Door
The opener can only operate from transmitters that have been programmed into its receiver. The receiver needs to learn the codes of any transmitter that will be used with the operator. Up to sixty four (64) codes can be stored in the receiver’s memory.

a. Ensure the button cover has been removed (see Electrocution caution) and the opener is turned on.
b. Press and hold the DOOR CODE button. The DOOR CODE LED will illuminate and beep to indicate the opener is in Code Learn mode (Fig. 8.1).
c. Press and hold the transmitter button that you want to control the door for two (2) seconds, pause for two (2) seconds, then press the same button again for two (2) seconds and release.
d. Release the DOOR CODE button.
e. Press the transmitter button to test.

8.2 Setting the Transmitter to Operate Vacation Mode
The opener can be programmed into a “Vacation Mode” where the opener will not respond to any transmitter except one preprogrammed unit.

f. Briefly press the DOOR CODE button once, then press it again and hold (will beep two times on second press (Fig. 8.2).
g. Press one of the four (4) buttons on the transmitter for two (2) seconds, pause for two (2) seconds, then press the same button again for two (2) seconds.
h. Release DOOR CODE button.
i. Press and hold the transmitter button for six (6) seconds to set Vacation Mode. The door code LED will stay lit while Vacation Mode is active.

To reset Vacation Mode, press the same transmitter button for two seconds.

8.3 Setting the Transmitter to Operate PET (Pedestrian) Mode

a. Briefly press the DOOR CODE button three (3) times, then press it again and hold (the opener will beep four times on the fourth press).
b. Choose a transmitter button not already coded into the receiver. Press and hold this button for two (2) seconds, pause for two (2) seconds, then press the same button again for two (2) seconds and release.
c. Release the DOOR CODE button.
d. Press the transmitter button to test.
8. Coding Transmitters

8.4 Setting the Transmitter to Operate the Courtesy Light

Although the courtesy light comes on with each operation of the opener, it may also be controlled by a transmitter without operating the door.

a. Press and hold the LIGHT CODE button. The LIGHT CODE LED will illuminate and the courtesy light will turn on to indicate that the light code learning is active (Fig. 8.3).

b. Choose a transmitter button not already coded into the receiver. Press and hold this button for two (2) seconds, pause for two (2) seconds, then press the same button again for two (2) seconds and release.

c. Release the LIGHT CODE button.

d. Press the transmitter button to test.

8.5 To Erase Programmed Codes

a. Select the transmitter you want to delete.

b. Press and hold the DOOR CODE BUTTON (Fig. 8.4).

c. Press the transmitter button you would like to delete for two seconds, pause for two seconds, press again for two seconds and then release.

Release the DOOR CODE BUTTON. The code should now be deleted. Confirm this by pressing the transmitter button - the function (e.g. door opening) should not respond.

8.6 Remotely Coding Transmitters

Using this method transmitters can be coded without access to the opener’s control panel as long as a pre-coded transmitter is available.

a. Take any pre-coded transmitter. Press the button for the function to be duplicated and release.

b. Using a small needle / pen, press and hold firmly for two seconds the middle button, through the Coding Hole (Fig. 8.5).

c. Within ten (10) seconds take the additional transmitter you wish to code. Hold the new transmitter’s button for two seconds, pause for two seconds, hold again for two seconds and then release.

d. Wait for ten (10) seconds and then press the new transmitter’s button to test.
# 9. Troubleshooting Guide

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible cause</th>
<th>Remedy</th>
</tr>
</thead>

</table>

If You Need a Service Call

If the opener needs a service please call the dealer who installed the garage door opener (their contact details are usually on a sticker on the back of your garage door). For product assistance contact 1300 133 944 within Australia.

BEFORE CALLING you should have the following information to assist in providing the appropriate service:
1. Has anything happened since the opener last operated OK, e.g. a storm, a jolt to the door etc.?  
2. What is the current light status on the opener?  
3. Manually disengage the door (Section 6.1). How easy is it to manually open and close the door?  
4. What model is the opener? (Model no. information is located at the rear of the opener)  
5. Who installed the opener? (Dealer no. information is located on a sticker on the back of your garage door)  
6. When was it installed? (If known)

Fig. 9.1
10. Door Maintenance

10.1 Door Maintenance
Whilst your opener does not require any periodic maintenance, the door that it is fitted to, does. Your garage door is a large, heavy, moving object and should be tested regularly to ensure it is in good condition. A poorly maintained door could cause fatal / serious injuries or damage to property.

- Frequently examine the door, particularly the cables, springs and mountings for signs of wear, damage or imbalance. **DO NOT USE** if repair or adjustment is needed since a fault in the installation or an incorrectly balanced door may cause injury.

10.2 Lubrication (every 3 - 6 months)
To ensure a long and trouble free life for your door the following is recommended:

- Guide Tracks: Clean the internal sections of the guide tracks with a cloth dampened with mineral turps or methylated spirits.
- Steel Hinges (if fitted): Sparingly lubricate with an all-purpose machine oil. Also lubricate wheel to axle bearings.
- Plastic Hinges: No lubrication is generally required; however silicon spray may be used if necessary.
- Springs: If accessible wipe over with an oily rag.

10.3 Door Service and Repair
If correct maintenance and servicing are not carried out, warranty may be void. To keep your door running well, it is recommended that your door be serviced by an experienced technician, every 12 months or earlier if required:

- Lifting Cables (if fitted): Check for wear through rubbing. If there is fraying or signs of corrosion contact your dealer immediately and discontinue use, leaving door in the closed position.
- Fasteners: Check all screws, nuts and bolts to ensure they are secure.
- Spring Tension: It is natural for springs to lose tension. Should the door become hard to operate or completely inoperative, contact your dealer.
10. Opener Maintenance

10.4 Opener Maintenance
To ensure a long and trouble free life for your opener the following is recommended:

• Monthly: Run the Safety Testing procedures in Section 7 to ensure garage door is fit for use.

NOTE: If the door does not operate smoothly, call your nearest Approved Dealer.

10.5 Service Indicator
While the door opener does not require regular servicing, to function correctly the door must be in good operating condition. As a reminder the Enduro™ has a built in maintenance counter. This counter has a factory default of 3000 cycles, which is the recommended service interval.

When this counter expires the yellow SERVICE LED will light up and opener beep three times at the start of each cycle (Fig. 10.1). In addition the courtesy light will flash and opener beep five times at the end of open cycle (when the door is fully open).

These warning signals will self extinguish after 30 cycles. When this service counter is triggered it is strongly recommended you contact your garage door dealer to arrange a door service. See Section 13 for Recommended Service Schedule.

However, if you choose not to have your door serviced the counter can be reset simply by pressing the LIMIT SET button.
11. Battery Replacement

(Battery Type: 3V Lithium Battery CR2032).
Use a non-metallic object (e.g. pen) to remove the battery. (Fig. 11.1). To test the battery is working, press and hold a transmitter button; (Fig. 11.2).

12. Battery Disposal

When batteries reach the end of their usual life in accordance with Australian Battery Recycling Initiative please follow the next simple steps for protecting the environment.

Refer to the Automatic Technology website for information on where to recycle batteries in Australia.

**DO NOT** throw the batteries in municipal waste. This symbol of the crossed out wheeled bin indicates that the battery should not be placed in the municipal waste. Check your local regulations for appropriate disposal of the batteries.

Recycling all batteries will have other environmental and social benefits:

- Some batteries are less toxic but hazardous for other reasons. Lithium batteries can explode or catch fire in landfill, while button cells are dangerous if swallowed by children. Recycling offers a safe and environmentally responsible solution for end of life batteries.
- Battery recycling recovers non-renewable materials such as lead, cadmium, stella, zinc, manganese, cobalt, silver, plastics and rare earth elements.
- Removal of batteries and other hazardous household products from household waste facilitates the recovery of organic materials through alternative waste technologies such as composting. Batteries and heavy metals are known contaminants in compost.
- The community supports recycling because it reduces waste to landfill and achieves environmental benefits.

**WARNING!** Prior to disposal, recycling, or collection, all battery terminals must be securely insulated with a non conductive material to prevent any two batteries from short circuiting and generating heat during storage or transport. Battery terminals may be insulated with electrical tape; or batteries may be individually packaged in a non conductive material (e.g., plastic bag or original packaging).

Purchased from: ___________________________ Purchaser: ___________________________

(described as “you” below)

Address: ___________________________ Installed by: ___________________________

Installed on (date): ___________________________ Invoice No: ___________________________

This Warranty is given by Automatic Technology (Australia) Pty Ltd (ABN 11 007 125 368) (ATA), 6-8 Fiveways Boulevard, Keysborough 3173, 1300 133 944, sales@automatictechnology.com.au

2. The Competition and Consumer Act 2010 (including the Australian Consumer Law) and other relevant statutes provide a set of statutory consumer guarantees and other legal rights that cannot be excluded, restricted or modified by contract. This Warranty is in addition to and does not affect any of your rights under the Australian Consumer Law and other relevant statutes.

3. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation of any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

4. Subject to your non-excludable rights under the Australian Consumer Law, ATA expressly excludes any liability for consequential loss, incidental or indirect damages (including but not limited to damages for loss of business profits, business interruption and loss of business information) due to a defect of the GDO-9 Enduro™ (Gen 2) or GDO-9 Dynamo™ (Gen 2) (Product). In particular any loss or damage caused to other equipment or accessories used with the product or any loss resulting from a delay in repair is excluded to extent permitted by law.

5. Subject to all of the matters set out below, ATA warrants in relation to the Product that:

(a) the Product’s drive units will be free of any defects in material and workmanship for at least 60 months after the date of purchase (as evidenced by the sales docket receipt), or 10000 cycles, which ever occurs first; and

(b) the Product’s other components and accessories will be free of any defects in material and workmanship for at least 12 months after the date of purchase (as evidenced by the sales docket receipt).

6. No additional warranty will apply for Products repaired during the relevant warranty period.

7. For all Products repaired outside the warranty period, a six (6) month warranty that the Product will be free of any defects in material and workmanship will apply from the date of dispatch of the Product to you. ATA may charge you for any repairs undertaken outside the warranty period, and will provide you with a quotation in relation to any such costs for your approval before proceeding with any repairs.

8. This Warranty applies only where you:

(a) immediately notify ATA at the contact details provided in paragraph 1 above or notify the or the retailer that you purchased the Product from of the alleged defect;

(b) return the product to the retailer that you purchased the Product from; and

(c) present the relevant sales docket and this Warranty document to the retailer to confirm the date of purchase.

9. Except for this Warranty, ATA gives no warranties of any kind whatsoever (whether express or implied), in relation to the product, and, subject to paragraph 1 above, all warranties of whatsoever kind relating to the product are hereby excluded.
14. Warranty

10. This Warranty excludes damage resulting from:
(a) normal wear and tear;
(b) accidental damage;
(c) incorrect installation of the Product;
(d) blown fuses, electrical surges, power surges or power spikes;
(e) theft, fire, flood, rain, water, lightning, storms or any other acts of God;
(f) any installation, configuration or use of the Product contrary to the instructions supplied with the Product;
(g) maximum continuous operating time exceeding 1 minute in 10;
(h) the operating force exceeding 15kg* (150 Newton) when moving the door manually to the open or closed position;
(i) the door surface area exceeding 18m\(^2\) for GDO-9 Enduro™ Gen 2 or 16.5m\(^2\) for GDO-9 Dynamo™ Gen 2;
(j) the door used with the Product not being in safe working order and condition;
(k) repairs which are not authorised by ATA;
(l) any failure to install or maintain the Product in accordance with the instructions supplied with the Product;
(m) any use which is not in accordance with the instructions provided with the Product;
(n) deliberate or negligent damage to the Product;
(o) any unauthorised modification to the Product;
(p) faulty or unsuitable wiring in the building in which the Product is installed;
(q) damage caused by insects;
(r) any cost or expense relating to the recall of the Product;
(s) installation of a residential garage door opener in a commercial or industrial premises or in a dwelling other than a single-family dwelling;
(t) radio or electrical interference; or
(u) acts or omissions of any person (including service providers approved by ATA) other than ATA.

11. ATA’s liability under this Warranty is limited, at ATA’s absolute option, to replacing or repairing the product which ATA, in its unfettered opinion, considers to be defective either in material and/or workmanship or to credit the dealer with the price at which the product was purchased by the dealer.

12. This Warranty does not extend to cover labour for installation of the Product following repairs, the cost of which must be borne by you.

13. This Warranty is limited to Return-to-Base (RTB) repair and does not cover labour for on-site attendance, the cost of which must be borne by you.

14. Except as specified in this Warranty, ATA will not charge you for any repairs or replacements conducted under the Warranty. However, ATA will charge you for any repairs which are not within the scope of this Warranty (or which are not required to be undertaken free of charge pursuant to the Australian Consumer Law).

15. This Warranty is void if the Product is not returned to the manufacturer in original or suitably secure packaging.

16. This Warranty is only applicable for repairs to the product carried out within Australia.

17. This Warranty does not cover consumable items including, without limitation, globes, batteries and fuses.

18. This Warranty is not transferable.

19. Where the Product is retailed by any person other than ATA, except for the warranty set out above, such person has no authority from ATA to give any warranty or guarantee on ATA’s behalf in addition to the warranty set out above.

20. Any provision of this Warranty that is prohibited or unenforceable in any jurisdiction is ineffective as to that jurisdiction to the extent of the prohibition or unenforceability. That does not invalidate the remaining provisions of this Warranty nor affect the validity or enforceability of that provision in any other jurisdiction.

21. Products presented for repair may be replaced by refurbished goods of the same type rather than being repaired. Refurbished parts may be used to repair the Product.

NOTES:
1. One (1) cycle = one (1) open and one (1) close action of the door.
2. This Warranty is to be read in conjunction with the owner’s copy of the installation instruction manual.
3. * The door that the Product is used with should be balanced in such a way that the user is able to open or close the door manually using a force not greater than 150 Newton (15 kg), other than to initially cause the door to start moving, which may require force in excess of that specified in this paragraph.
Is your opener beeping and flashing?

It may be time for a service (for more details see section 10.5)
