IMPORTANT SAFETY INSTRUCTIONS

Warning - It is vital for the safety of persons to follow all instructions. Failure to comply with the following Safety Rules may result in serious personal injury and/or property damage.

For ADDITIONAL SAFETY protection we STRONGLY recommend the fitting of a Photo Electric Beam. In most countries Photo Electric Beams are mandatory on all garage doors fitted with automatic openers. For a small additional outlay we recommend that Photo Electric Beams be installed with the automatic opener ensuring additional safety and peace of mind.

DO NOT operate the garage door opener unless the garage door is in full view and free from objects such as cars and children/people. Make sure that the door has finished moving before entering or leaving the garage.

DO NOT operate the garage door opener when children/persons are near the door. Children must be supervised near the garage door at all times when the door opener is in use. SERIOUS PERSONAL INJURY and/or property damage can result from failure to follow this warning.

DO NOT allow children to operate the garage door opener. SERIOUS PERSONAL INJURY and/or property damage can result from failure to follow this warning.

Regularly check to make sure that the SAFETY OBSTRUCTION FORCE is working correctly, and is TESTED (by placing a 50mm high object on the floor) and set as per the Installation Instructions Manual. Failure to follow the manual could result in SERIOUS PERSONAL INJURY and/or property damage. This test must be repeated at regular intervals and the necessary adjustments made as required.

DO NOT disengage the door opener to manual operation with children/persons or any other objects including motor vehicles within the doorway.

Install the wall switch or wall mounted transmitter in a location where it is out of reach of children and the garage door is visible.

The door opener is not intended for use by young children or infirm persons without adequate supervision. Children should be supervised to ensure that they do not play with the remote transmitters or the opener.

Keep hands and loose clothing CLEAR of the door and door opener at all times.

If the roll up door is the only entrance to the garage and a battery back up kit is not fitted to the opener - a keyed cable release should be fitted to the exterior of the garage.

The unit should be installed so that it is protected from the elements. It should not be exposed to water or rain. It is not to be immersed in water or sprayed directly by a hose or other water carrying device.

The garage door must be WELL BALANCED. Sticking or binding doors must be repaired by a qualified garage door installer prior to installation of the opener.

Frequently examine the installation, in particular cables, springs and mountings for signs of wear, damage or imbalance. DO NOT use if repair or adjustment is needed since a fault in the installation or an incorrectly balanced door may cause injury. DO NOT attempt to repair the door yourself as hardware is under extreme tension.

REMOVE OR DISENGAGE all garage door locks and mechanisms prior to installation of the opener.

Connect the garage door opener to a properly EARTHED general purpose 240V mains power outlet installed by a qualified electrical contractor. The outlet (and opener) must be positioned so that it is easily accessible.

DISCONNECT THE POWER CORD from mains power before making any repairs or removing covers. Only EXPERIENCED service personnel should remove covers from the garage door opener.

When using auto close mode, a PHOTO ELECTRIC BEAM must be fitted correctly and tested for operation at regular intervals. EXTREME CAUTION is recommended when using auto close mode. ALL SAFETY RULES must be followed.

In order for the garage door opener to SENSE an object obstructing the door way, some FORCE must be exerted on the object. As a result the object, door and/or person may suffer DAMAGE or INJURY.

If the power supply cord is damaged, it MUST be replaced by an authorised service agent or suitably qualified person.

Make sure that the door is fully open before driving in or out of the garage and fully closed before leaving the driveway.

Make sure that remote controls are kept out of reach of children.
Thank you for purchasing the Dominator RDSD Roller Garage Door Opener. This opener is designed to suit vertical operating continuous curtain roll up doors. The components and materials used in this opener are of the latest technology and highest quality. Listed below are some of the many features.

OPERATION
To open or close the door simply press the keyring transmitter, easy access transmitter, or optional wall switch for two seconds. During an open or close cycle the door can be stopped by pressing the button while the door is in motion. The next actuation will move the door in the opposite direction.

HOPPING CODE
Every time a transmission is made from the remote transmitter a new security code is generated. The number of possible code combinations is over 4.29 billion. This greatly enhances the security of the system. Code “grabbing” is made a thing of the past.

AUTOMATIC LIMITS POSITIONING
The limits positioning system automatically calculates the doors’ travel limits and stores it in memory. If the door is moved manually within the travel limits during a power failure, the system will recognise this once the power is restored and stop at the correct limit position if the door is activated.

During installation the hand held transmitter can be programmed to set the door limits positions.

INTELLIGENT SAFETY OBSTRUCTION SYSTEM
Whilst performing a close cycle the door will automatically reverse if it should hit an obstacle or is restricted in some manner. The amount of force the door should encounter before reversing is automatically adjusted by the control system during the initialisation of the opener. The door will also stop if restricted whilst opening. The safety obstruction force should be checked at least once a month. See installation manual for instructions.

SECURITY CODE STORE
The Opener uses state of the art technology in storing transmitter codes. Up to 24 different transmitters can be stored in the openers memory.

OVER LOAD INDICATOR
When the maximum opening and closing capacity of the opener is exceeded an audible beeper will sound to indicate that an overload has occurred.

AUTO COURTESY LIGHT
The opener’s courtesy light illuminates automatically whenever the door is activated. The light can also be switched on and off without operating the door. This is done by pressing the button on any transmitter which has been coded to operate the light. The light will stay on for approximately three minutes then switch off. This time is also adjustable.

BATTERY BACK UP (OPTIONAL)
The opener has provision to include a battery back up module. This is an ideal addition if the garage door is the only entrance to the garage or if the area is prone to power cuts.

Note: If the roll up door is the only entrance to the garage and a battery back up kit is not fitted to the opener - a keyed cable release should be fitted to the exterior of the garage.

VACATION MODE
A transmitter can be programmed to block out all other transmitters that have been programmed into the opener’s memory. Vacation mode is ideal for homes with non-permanent tenancy or when the door is to be left idle for long periods of time.

PET (PEDESTRIAN) MODE
A transmitter can be programmed to open the door partially so that the family pet can enter and exit the garage at any time. If required, you may also wish to open the door to a height suitable only for pedestrian access. The opening height is adjustable.

AUTO CLOSE MODE
The opener can be programmed to automatically close after an open cycle. It is compulsory to install a photo electric beam if this mode is selected, otherwise the door may cause personal injury or damage to property. Auto close time is adjustable.

PHOTO ELECTRIC BEAM (OPTIONAL)
The opener has an input for a photo electric beam to be connected for extra safety protection and use of the auto close mode.

MANUAL OPERATION
The opener is equipped with a unique manual disengaging device. If the power to the opener is disrupted for any reason the door can be switched into manual mode by pulling down on the string handle, then releasing. This will allow you to manually open or close the door. By repeating this action the opener is returned to automatic mode.

EASY ACCESS TRANSMITTER
Inside the manual release handle is a transmitter designed to be in easy reach so that the garage door can be operated without having to stretch to reach the O/S/C button on the control panel.
1. **P. E. SHUNT.** The shunt has to be removed when connecting a Photo Electric Beam.

   **NOTE:** P. E. SHUNT must not be removed otherwise the opener will not function correctly. Remove only when a P.E beam is to be connected.

2. **24V OUTPUT** supplies 24V DC at 30mA to power an external receiver, or electronic device, etc.

3. **O/S/C INPUT** is used for the connection of a wired switch (momentary contact). This switch can then be used to open, stop or close the door.

4. **LIGHT INPUT** is used to control the courtesy lights either independently via remote control or when the door is activated.

5. **LIGHT CODE button (white)** is used for storing or erasing the transmitter button (code) you wish to use to switch the opener's courtesy light on and off.

6. **CLOSE drive button** (red) is used only during installation to help set the close limit position. Pressing and holding this button will move the door in the close direction. Movement stops when the button is released.

   **NOTE:** The close safety obstruction detection is inoperable whenever the Close Drive button is used to move door. This button is disabled after initialisation.

7. **CLOSE LIMIT LED** (red) is very helpful during installation. It illuminates and flashes when the door is closing and remains steady on when the close limit position has been reached.

8. **AUTO CLOSE TIME button** is used to adjust the auto close time. While holding in the auto close button and then pressing the open button the time is increased. Each press will increase the time by one second. Pressing the close button will decrease the time.

9. **ENGAGE/DISENGAGEMENT CORD** is used to switch the door into manual mode especially in case of a power failure. The length of the string is also adjustable.

10. **EASY ACCESS TRANSMITTER** The “manual release” engage/disenagement handle has a wireless transmitter, within its housing if the button is pressed it will open, stop or close the garage door.

11. **SET button (orange)** is used during the installation phase together with the Open and Close buttons to set the door limit positions. The Set button is also used to re-initialise the opener.

12. **O/S/C button** (Yellow) is used after set up to test the Open, Stop and Close cycles for the opener. The opener has to be initialised by the Set button before the O/S/C button becomes operable.

13. **BATTERY CHARGER INPUT** is used for the connection of a battery back up kit.

14. **OPEN DRIVE button** (green) is used only during installation to help set the open limit position. Pressing and holding this button will move the door in the open direction. Movement stops when the button is released.

   **NOTE:** The open safety obstruction detection is inoperable whenever the Close Drive button is used to move door. This button is disabled after initialisation.

15. **OPEN LIMIT LED** (green) is very helpful during installation. It illuminates and flashes when the door is opening and remains steady on when the open limit position has been reached.

16. **FORCE MARGIN SET** is used to change the obstruction force margin sensitivity. The obstruction force pressure is set automatically by the opener during installation. The pressure can be adjusted manually to compensate for environmental factors such as wind, etc. that may affect the operation of the door/opener.

16. **PROG INPUT** is used for the connection of a universal programmer for the purpose of editing control and receiver functions.
1) P.E. SHUNT, PE INPUT, OSC INPUT, LIGHT INPUT, 24V DC OUTPUT
2) LIGHT CODE BUTTON (BLACK)
3) CODING LED (RED)
4) DOOR CODE BUTTON (BLUE)

IMPORTANT SAFETY INSTRUCTIONS FOR INSTALLATION
Warning: Incorrect installation can lead to severe injury. Follow ALL installation instructions.

SIDE ROOM REQUIREMENTS
Fig. 1 shows the minimum and recommended side room that is required to mount the opener. The distance between the edge of the door curtain and the inside of the bracket must be at least 40mm. However, for easier access it is recommended that at least 95mm is allowed.

1. CHECK OPERATION OF DOOR
BEFORE BEGINNING THE INSTALLATION OF THE AUTOMATIC OPENER CHECK THE OPERATION OF THE DOOR.
The door must be well balanced and be in a reasonable operating condition. You should be able to lift the door smoothly and with little resistance. It should stay open around 900mm to 1200mm above the floor. The door should not stick or bind in the guide tracks. The ideal operational effort in raising or lowering the door should not exceed a force of 10kg (22 lbs.). Make sure that all door locks, ropes, chains etc. are either released, or disabled and remove unnecessary accessories.

2. FIXING OF DOOR WEIGHT BAR
Move the door manually to the mid open position. Place the weight bar on the bottom rail, in the middle of the door and secure with the fasteners provided (Fig. 2). Check the operation of the door again. If the door feels heavy it may require extra tension to be added to the door springs. Refer to the door installation manual from the manufacturer on how to tension the door.

3. INSTALLING LOCKING BAR COVERS
To protect against entrapment of fingers etc. inserted into door guides – remove the protective backing of the double sided tape and install the locking bar covers over the holes in each door guide.
4. EASY ACCESS TRANSMITTER

The Easy Access Transmitter is prepared ready for use with the battery pre-installed. Before the transmitter can be operational, the transmitter code has to be stored into the openers memory. To store the code refer to Step 10.1 on page 15.

REMOVING THE COVER TO REPLACE BATTERY
1. Rotate the cover Clockwise to CLOSE
2. Rotate the cover Anti-clockwise to OPEN

REMOVING THE BATTERY
(Battery Type: 3V Lithium Battery CR1220).
Use a non-metallic object (e.g pen) to remove the battery.
Gently lever the battery out of the holder, taking care to not damage the circuit board. (Fig. 6)

WARNING
Metallic objects used to remove the battery may damage the circuit board or the battery.

REPLACING THE BATTERY
Make sure that positive (+) side is facing up. Place one side of the battery into the holder (Fig. 7), then press the battery in and down firmly until it clicks into a flat position.

Note: The length of the manual release cord is user adjustable. Simply slide the plastic toggle along the cord to achieve the desired length. Adjust the length of the cord so that it can be easily reached by an adult of average height (i.e. less than 1.8m tall).
5. FIXING DRIVE UNIT TO THE DOOR
The RDSD Drive Assembly can be fixed to the roll up garage door in a variety of ways. Described below is one method of fixing. Make sure there is enough side room to slide the drive assembly onto shaft.

**PLEASE NOTE:** THE INSTRUCTIONS FOR FIXING THE DRIVE ASSEMBLY TO THE DOOR ARE FOR RIGHT HAND INSTALLATION.

**FITTING DRIVE UNIT TO DOOR**
(Fig. 8, Fig. 9, and Fig. 10).
1. Check that the door shaft U bolt is securely tightened on the left hand side of the door.
2. Raise the door and tie a rope around the centre to secure the roll.
3. Support the right hand end of the door with a suitable prop, e.g. step ladder and soft padding to protect door surface.

**WARNING:** DO NOT ALLOW CHILDREN/PERSONS AROUND THE DOOR AND PROP. SERIOUS PERSONAL INJURY AND/OR PROPERTY DAMAGE CAN RESULT FROM FAILURE TO FOLLOW THIS WARNING.

4. Carefully loosen and remove the right hand door shaft U-bolt.
5. Make sure that the door supporting prop is secure. While the door is supported remove the right hand door mounting bracket from wall.
6. Remove the drive assembly from the packaging. Try to rotate the drive gear by pushing on the fork. If the gear does not rotate the manual mode has to be selected. To select pull downward on the string handle, then release slowly. The drive gear should now rotate freely.
7. Slide the drive assembly over the door axle making sure that the fork extends into and over one of the spokes of the door drum wheel.
8. Refit the door mounting bracket to the wall. In some cases the bracket may have to be re-positioned. Re-fit and tighten the door shaft U-bolt. Remove door supporting prop and untie the rope from the curtain.
9. Straighten the drive assembly and position as per Fig. 10. Tighten the two locking bolts firmly to secure the Drive Unit.
10. Check the manual operation of the door by raising and lowering the door. The door should run smoothly and not catch on any part of the drive assembly.
11. Adjust the length of the manual release cord so that it can be easily reached by an adult of average height (i.e. less than 1.8m tall).

**NOTE:** After installation, ensure that parts do not extend over public footpaths or roads.
6. FIXING DOOR CURTAIN TO DRUM WHEEL
The door curtain has to be secured to the drum wheel with suitable fasteners.
1. With the door in the fully closed position, mark the curtain (Fig. 11) on both ends of the door.
2. Open door slightly to have access to the marked positions. Secure the curtain to drum wheel using self drilling screws (two on each end). The screws should be at least 90° apart.

7. SETTING DOOR TRAVEL LIMITS POSITIONS - METHOD ONE - VIA THE CONTROL PANEL
IMPORTANT NOTE: The O/S/C button will not function until the open and close limits positions are set.

NOTE: The opener is factory preset for installation on the RIGHT HAND SIDE. When the opener is mounted on the left side of the door the opener will travel in reverse. To change the direction of travel for LEFT HAND SIDE installation do the following step - otherwise proceed with step 7.1:

1. Make sure the opener is engaged and power is connected.
2. Press the Close button briefly. The door should start to close.
3. If the door opens - release and press the OSC button within 2 seconds.
4. Press the Close button again to confirm that the door is moving in the correct direction.

7.1 SETTING LIMITS POSITIONS
1. With the drive assembly in manual mode (Fig. 12) move the door up by hand to an approximately mid open position.
2. Re-engage the drive gear to the door by pulling down on the string and then releasing.
3. Press the Close button (Fig. 13), the door will start closing. Release the button once you have reached your desired closed limit position. (Adjust close position with Open button if required).
4. Press the Set button. This action will store the closed limit position into memory.
5. Press the Open button, the door will start opening. Release the button once you have reached your desired open limit position. (Adjust open position with Close button if required).

IMPORTANT WARNING: Please be aware that the garage door will start closing automatically once step 7 is performed. The door will also automatically re-open after fully closing with a short pause between the cycles.

7. Press the Set button (Fig. 13). This action will store into memory the open limit position. The door will now automatically close to its limit position then fully open to calculate the safety obstruction forces (ISS). Please be aware of the above warning. The opener can now be operated from the O/S/C Button.

Go to STEP 9 and test the Safety Obstruction Force.

7.2 RESETTING DOOR LIMIT POSITIONS
The door travel limit positions can be deleted for new positions by following the steps below:
1. Press and hold the Close button (Fig. 13) for six (6) seconds until you hear three beeps and the red Close Limit LED starts to flash. Release the button.
2. Follow STEP 7.1 1 to 7 to set new travel limit positions.
8. SETTING DOOR TRAVEL LIMIT POSITIONS – METHOD TWO - VIA THE REMOTE CONTROL

IMPORTANT NOTE: The O/S/C button will not function until the open and close limits position are set.

NOTE: The opener is factory preset for installation on the RIGHT HAND SIDE. When the opener is mounted on the left side of the door the opener will travel in reverse. To change the direction of travel for LEFT HAND SIDE installation do the following:

1. Make sure the opener is engaged and power is connected.
2. Press the Close button briefly. The door should start to close.
3. If the door opens - release and press the OSC button within 2 seconds.
4. Press the Close button again to confirm that the door is moving in the correct direction.

8.1 SETTING LIMITS

To code transmitter for setting limits
1. Press and hold the Door Code button (Fig. 14).
2. Press button 1 (Fig. 15) on the transmitter for two seconds.
   Release and pause for two seconds. Press the same button again on the transmitter for two seconds.
3. Release the Door Code button.

To set limits
4. With the opener in manual mode (Fig. 12) move the door up by hand to an approximately mid open position.
5. Re-engage the opener.
6. Press button 4, the door will start closing, release the button once you are 1 to 2 cm from your desired closed limit position.
7. Press button 4 briefly, each press will enable you to inch the door to your desired closed position. (Press button 1 to adjust position if necessary).
8. Once you are happy with the position press button 2, this action will store into memory the closed limit position.
9. Press button 1, the door will start opening. Release the button once you are 1 to 2 cm from your desired open limit position.
10. Press button 1 briefly. Each press will enable you to inch the door to your desired closed position. (Press button 4 to adjust position if necessary).

IMPORTANT WARNING: Please be aware that the garage door will start closing automatically once step 11 is performed. The door will also automatically re-open after fully closing with a short pause between the cycles.

11. Once you are happy with the position press button 2, this action will store into memory the open limit position. The door will now automatically close to its limit position then fully open to calculate the safety obstruction forces (ISS). Please be aware of the above warning.

8.2 RESETTING DOOR LIMITS POSITIONS

The door travel limit positions can be deleted for new positions by following the steps below:
1. Press and hold the Close button (Fig. 16) for six (6) seconds until you hear three beeps and the red Close Limit LED starts to flash. Release the button.
2. Follow STEP 8.1 to set new travel limit positions.

Important: There is no need to re-code the transmitter used for setting the limit positions. After the limits are reset the transmitter will automatically reset to normal operation.

Go to STEP 9 and test the Safety Obstruction Force.
9. SAFETY OBSTRUCTION TEST
Please take care when testing the Safety Obstruction Force. Due to excessive forces failure to follow this warning may cause SERIOUS PERSONAL INJURY and/or property damage. The test below should be repeated at regular intervals (approximately every two months).

9.1 TESTING CLOSE CYCLE
1. Open the door by pressing the Yellow O/S/C button (Fig. 16).
2. Place a length of timber approximately 50mm high on the floor directly under the door (Fig. 17).
3. Press the Yellow O/S/C button to close door. The door should strike the object and start to re-open.
4. Press again to close the door. When the door is approximately one metre above the floor, hold the bottom rail of the door firmly, the door should reopen. If the door stops and fails to re-open, it is possible that the motor direction is set incorrectly. Change the motor direction as per Step 7 and re-test.

IMPORTANT WARNING: If the test fails, there may be a problem with the door, discontinue use, put the door into manual operation and call for service.

9.2 TESTING OPEN CYCLE
1. With the door closed - press the Yellow O/S/C button, to open the door. When the door is approximately one metre above the floor, hold the bottom rail of the door firmly, the door should stop.

ADJUSTING SAFETY OBSTRUCTION FORCE
The Safety Obstruction Force is calculated automatically and set in memory on the opener. It is usually not necessary to adjust the Safety Obstruction Force. The only time the force may need to be increased is due to environmental conditions, for example, windy or dusty areas, and areas with extreme temperature changes.

9.3 TO INCREASE FORCE PRESSURE
1. Press and hold the Force Margin Set button (Fig. 16)
2. While holding down the Force Margin button, press the Open button. Each press increases the force margin in both directions. The Open Limit LED will illuminate each time the Open button is pressed. Each press increases the force margin. If the Open Limit LED flashes continuously when the open button is being pressed, this indicates that the maximum force pressure setting has been reached. Test the force as per step 9.1 and 9.2.

9.4 TO DECREASE FORCE PRESSURE
1. Press and hold the Force Margin Set button (Fig. 16).
2. While holding down the Force Margin button, press the Close button. Each press decreases the force margin. The Close Limit LED will illuminate each time the close button is pressed. If the Close Limit LED flashes continuously when the Close button is being pressed, this indicates that the minimum force pressure setting has been reached. Test the force as per step 9.1 and 9.2.

9.5 TO RECALL FACTORY SET FORCE
1. While holding down the Force Margin Set button (Fig. 16) press the SET button for two (2) seconds.
2. Release both buttons. The default setting should now be recalled.

9.6. TO RE-CALCULATE FORCE MARGIN (ISS)
Press and hold the Set Button for two (2) seconds, the beeper will sound once. The door will start to move and re-calculate force margins. The door can move between the open and close limit positions up to four (4) times (depending on the position of the door and the power up condition). A single beep will be heard once the process is complete. The door is now ready for use.

IMPORTANT NOTE:
After installation ensure that the opener stops or is prevented from opening when the door is loaded with a mass of 20kg fixed centrally at the bottom edge of the door.
10. SETTING TRANSMITTERS CODES
The memory in the opener can store up to 24 remote control transmitters. Make sure to insert the battery into the transmitter with the correct polarity.

10.1 STORING THE TRANSMITTERS CODE
1. Press and hold Door Code button (Fig. 18).
2. Press the button (one of four) on the transmitter you would like to use to control the door for two seconds, pause for two seconds. Press the same transmitter button again for two seconds.
4. Press the transmitter button to test if it operates the door.

10.2. SETTING THE TRANSMITTER TO OPERATE THE COURTESY LIGHT
The transmitter can be programmed to operate the courtesy light on the door opener. The factory default is set to 3 mins.
1. Press and hold Light Code button (Fig. 19).
2. Press the button on the transmitter you would like to use to switch on the light for two seconds, pause for two seconds. Press the same transmitter button again for two seconds.
3. Release all buttons to store the transmitter in memory.
4. Press the transmitter button to test if it switches on the light.

10.3. SETTING THE TRANSMITTER TO OPERATE PET (PEDESTRIAN) MODE
1. Press and hold Door Code button and the Close button (Fig. 19).
2. Press the button on the transmitter you would like to use to control pet mode for two seconds, pause for two seconds. Press the same transmitter button again for two seconds.
3. Release all buttons to store the transmitter in memory.
4. Press the transmitter button to test if it operates the pet mode.

To change the default pet door opening position, refer to Step 17 on page 18.

10.4. SETTING THE TRANSMITTER TO OPERATE VACATION MODE
1. Press and hold Light Code button and the Close button (Fig. 19).
2. Press the button on the transmitter you would like to use to control vacation mode for two seconds, pause for two seconds. Press the same transmitter button again for two seconds.
3. Release all buttons to store the transmitter in memory.
4. To test, press and hold the transmitter button set for vacation mode for five seconds to set Vacation Mode. Then try a different transmitter that has already been coded into the door - it should be disabled.

TO RELEASE THE OPENER FROM VACATION MODE
To disable Vacation Mode press the same button for two seconds. Please note that when vacation mode is activated all stored transmitters will be locked out. This mode can only be deactivated by the transmitter which has been stored to activate this mode.
11. STORING TRANSMITTER(S) FROM A REMOTE LOCATION

Using this method you don’t need to have access to the control panel on the Door Opener. However, you do need a transmitter that is pre-coded to the controller’s receiver.

IMPORTANT NOTE: The Door or Courtesy Light must be activated when the step below is performed. The moving Door or Light switching on is to confirm from a remote location that, the correct button was pressed, and the transmitter is in range of the Opener.

1. Take any pre-coded transmitter. Press the button for the function you require until the door is activated and release.
2. Using a small needle press the button through the Coding Hole for two seconds (Fig. 20)
3. Within 10 seconds take the additional transmitter you wish to code.
4. Press the button (one of four) on the new transmitter you would like to use to control the door for two seconds, pause for two seconds. Press the same button again on the transmitter for two seconds, the button should now be stored.
5. Wait for 10 seconds and then test the new transmitter to see if it operates the door.

12. DELETING PROGRAMMED CODES

12.1 DELETING A STORED TRANSMITTER CODE
1. Select the transmitter you want to delete.
2. Press and hold the Door Code button (Fig. 21).
3. Press the transmitter button you would like to delete for two seconds. Pause for two seconds. Press the transmitter button again for two seconds.
4. Release the Door Code button. The code should now be deleted. Confirm this by pressing the transmitter button, the door should not respond.

12.2 DELETING ALL STORED TRANSMITTER CODES
1. Turn the Power Off to the Opener.
2. Press and hold the Door Code button (Fig. 21).
3. Turn the Power On again, while holding the Door Code button. The Open Limit, Close Limit and Door Status LED’s will illuminate for about five seconds. These LEDs will turn off and the Coding LED will illuminate. Continue holding until the coding LED turns off. Release the Door Code button. All the stored codes including the Courtesy Light codes should now be deleted. Confirm this by trying to operate the door by pressing the transmitters previously used to control the door, the door should not respond.
13. FITTING THE SAFETY PHOTO ELECTRIC BEAM SENSOR (OPTIONAL)
Locate the Photo Electric Beam (P.E.) (normally closed contact type) in a strategic location within doorway. We recommend 150mm above the floor level and as close as possible to the door opening, inside the garage. Remove shunt from P.E. connector (Fig. 22) and connect the wires from the P.E. wiring harness as per Fig. 23.

Note: The wiring diagram is for a Transmitter/Receiver type photo electric beam: model: PE-2 (Order Code 90214) with Wiring Harness (Order Code 01900).

Make sure to align the beams correctly. Follow the manual supplied with the Photo Electric Beam.

WARNING: When using Auto Close Mode and P.E. beams, the doorway must be clear of all obstructions and persons at all times. The location of the beam and manner in which it is installed might not give safety protection at all times. Check to make sure that the height of the beam and type used give maximum protection possible.

14. SETTING AUTO CLOSE TIME
IMPORTANT NOTICE: IT IS COMPULSORY TO INSTALL A PHOTO ELECTRIC BEAM BEFORE USING THE AUTO CLOSE MODE.
The Auto Close timer will only start after the Photo Electric Beams (P.E.) path is broken and the auto close time has been set. If the P.E. path is not broken the door will remain open till the path is broken. If the Door Opener incurs an obstruction (not from the P.E.) while closing the door will re-open and not auto close until the path of the P.E. beam is broken again.

SETTING AUTO CLOSE TIME
1. Press in and hold the Auto Close Time button (Fig. 22).
2. While holding in the Auto Close Time button, press the Open button. Each press of this button will add one second to the auto close delay time.
3. To decrease the delay time follow Step 1 and press the Close button. Each press will deduct one second from the auto close time.
4. Press the O/S/C button or transmitter to open the door. When the door is fully opened the Open Limit green LED will flash to indicate that the auto close mode is in operation. Break the path of the P.E. Beam momentarily, this will initialise the auto close mode. The door will pause for the programmed time and start to auto close.

15. MANUAL RELEASE
To switch the opener to manual mode simply pull the red manual release handle down and release. To re-engage the opener repeat the above action (Fig. 24).

Note: The door may move uncontrollably if the spring tension is weak or not set properly or the door is unbalanced. If this occurs do not use the door and contact your installer for service.
16. SETTING COURTESY LIGHT TIME
The preset courtesy light time on the door opener is 3 minutes. This time can be changed by the following:
1. Press and hold both the Auto Close Time button and Force Margin Set buttons (Fig. 25).
2. While holding the two buttons, press Open button. Each press will add 10 seconds to the light time.
3. To decrease the time follow Step 1 and press the Close button. Each press will deduct 10 seconds from the light time.
4. To recall the factory set default light time press in and hold together the Auto Close Time button, the Force Margin Set button and the Set button for about 2 seconds. Release all buttons, the factory set default of 3 minutes will be recalled.

17. SETTING THE PET MODE DOOR OPENING POSITION.
The default Pet (Pedestrian) position is about 1/4 turn of the door drum above the closed position. The pet mode status is indicated by both the Open and Close Limit LED's being illuminated. The default position can be changed by the following:
1. Make sure the door is in the closed position. Press and hold the Open button for six (6) seconds (Fig. 26), you should hear three beeps and the Open and Close Limit LEDs will flash rapidly.
2. Press the Open or Close buttons to move the door to your required new pet open position.
3. Press the Set button to record the new position.

The pet mode is activated from a transmitter button coded to that function (see Step 10.3 on page 15). When activated the door drives to the preset position from either above or below. If the pet button is pressed while the door is moving the door will be stopped. If the pet button is pressed when the door is in the pet position, then the door will be closed. No auto close is enabled.

18. INSTALLATION OF WALL MOUNTED TRANSMITTER HOLDER
1. Mount the holder in a location out of reach of children (at least 1.5m from the floor) and convenient to the customer. Make sure the door is visible from this location.
2. The transmitter can be easily clipped in and removed from the holder as required.
3. To set the transmitter codes refer to Step 10.

19. RESET ALL FACTORY DEFAULTS
1. Turn power off.
2. Press and hold Set button.
3. Turn power on and continue holding Set until all LEDs are off.

Note: This does not erase transmitter codes stored in memory.

20. RE-INITIALISING THE OPENER
To re-initialise the opener press and hold the Set Button for two (2) seconds, the beeper will sound once. The door will start to move and re-calculate force margins. The door can move between the open and close limit positions up to four (4) times (depending on the position of the door and the power up condition). A single beep will be heard once the initialisation is complete. The door is now ready for use.

TECHNICAL SPECIFICATIONS

INPUT VOLTAGE: 230V - 240V AC 50Hz
CONTROLLER VOLTAGE: 24V DC
STANDBY POWER: 1.8 Watts
MOTOR POWER: 100 Watts
MOTOR TYPE: 24V DC Permanent Magnet
OPERATING TEMPERATURE: +5° to +40°C
MAXIMUM DOOR OPENING:*a | WIDTH: 5500mm
                        | HEIGHT: 2700mm
                        | WEIGHT: 100Kg
MAXIMUM LIFTING FORCE: 200N (20Kg)
RECOMMENDED LIFTING FORCE: 120N (12Kg)
OPENER LIMITS TRAVEL: 3.0 Turns of Door Drum Wheel
OPERATING TIME - INTERMITTENT: 4 Minutes
RECEIVER TYPE: UHF 433.92 MHz. AM Receiver
RECEIVER CODE STORAGE CAPACITY: 24 x 4 Button Transmitter Codes
TRANSMITTER FREQUENCY: 433.92 MHz
CODING TYPE: Code Hopping
No. of CODE COMBINATIONS: Over 4.29 Billion Random Codes
CODE GENERATION: Non-linear Encryption Algorithm
PTX-4 TRANSMITTER BATTERY: A23 Alkaline 12 Volts
EAT-1 TRANSMITTER BATTERY: CR1220 Lithium 3 Volts
GLOBE: Festoon Type - 15W 24V DC
FUSE: 10A Slow Blow

Note:
1. The maximum continuous curtain residential roll up door opening that the RDSD opener can be installed on is 5500mm wide by 2700mm high. The door must be well balanced. A person of average strength should be able to lift up the door manually with very little effort in case of an emergency.

2. Intermittent operations may occur in areas which experience very strong winds. The strong wind puts extra pressure on the door and tracks which may in turn trigger the safety obstruction detection system intermittently.

*Please Note: Some areas may be prone to excessive radio interference brought on by devices such as cordless telephones, wireless stereo headphones and baby monitors. It is possible that these devices could cause a degree of interference such as to greatly reduce the range of the transmitter. In such an instance please contact your authorised dealer for an alternative frequency replacement kit. As this is not a warranteable situation but an environmental issue charges may apply for the changeover.

*Please Note: Failure to maintain your garage door may void the warranty for your garage door opener.*
This Dominator product is warranted against manufacturing defects for a period of twenty-four (24) months from the date of purchase.

This includes all electronic items sold with the opener in the way of circuit boards and transmitters.

It does not cover any normal consumable items such as batteries, globes and fuses.

The Company, within this warranty period, will replace any parts, components, or the complete unit Product at the Company’s option.

These replacement parts are covered for the remainder of the original warranty only.

In the event of any defect arising in the equipment during the warranty period, such repairs should only be carried out by a Dominator Authorised dealer from which the was installed, or by the Dominator Manufacturing Service Centre.

These repairs would be carried out at no charge to the owner, subject to the conditions specified herein.

The owner is responsible for any transportation and insurance costs, if the product has to be returned for repair.

The warranty does not include service charges that may be rendered by the authorised servicing agent for travel, transportation expenses of the product or parts to and from the owner or removal and reinstallation costs which are payable by the owner.

This warranty does not extend to accessories or defects or injuries caused by or resulting from causes not attributable to faulty parts or the manufacture of the product, including but not limited to, defect or injury resulting from misuse, abuse, neglect, accidental damage, improper voltage, liquid contact or spillage, connection of devices other than those approved, authorised or manufactured for the Product by Dominator International Ltd.

The Company accepts no liability pursuant to this warranty for any consequential loss or damage or injury, direct or indirect, to any person or material object, arising from the use, failure or malfunction of the Product.

The warranty shall not apply if the Product is used in commercial or multiple entry car park applications as the Product is only recommended for use in domestic situations.

This warranty becomes void if the Product is altered, tampered with or damaged by accident, or damaged in any other way by improper use.
